

When designing a sublimated image buff please note the following:

Due to the way the machine cuts the material it is vital that when you design your image that you allow for this cut off point.

Basically, the buff itself is 26cm x 52cm so when you send in the design it needs to have all the material you want to show on the buff within this frame.

It should have a small border around it (3cm) that will be cut off from the machine.

The focus of the design must be placed within a 20cm x 46cm area with a 3cm border around it.

All design you need must focus on the area of 24x48cm
